

WALL MOUNTED SPEAKER ENCLOSURE
ABSTRACT OF THE DISCLOSURE

A wall mounted speaker includes a baffle and a flange and fasteners for affixing the baffle to the flange. The fasteners include a plurality of spaced posts and latch members. Each latch engages a corresponding post. The lower portion of each post is affixed to the flange and the corresponding latch is removably and pivotally mounted to the upper portion of a post. Each latch includes a body portion, a lever and a cam and is movable between a first position where the body portion is engaged with the baffle and the cam is mounted to upper portion of a post for securing the baffle to the flange and a second position wherein the body portion is moved away from the baffle for releasing the baffle from the flange. The baffle includes a plurality of channels adjacent a respective post. The body portion of each latch is positioned in a respective channel when the latch member is in the first position. The cam includes a slot formed therein for mounting the latch around an upper portion of a post.
